Preface

In recent years, Building Simulation has been confirmed as the technique based on computer calculation to estimate either the energy or the non-energy performance of buildings, building components and systems, considering in particular its detailed variability in time.

In the past, most of the efforts were put into improving the detail and increasing the reliability of the results and the capability of describing the behavior of the building more realistically. In this respect, validation has been one of the major concerns of the building simulation tool. The main aim of simulation was to understand better the behavior of some specific processes, their interaction and the behavior of the building. Modelling was particularly useful to compensate for missing experimental data and to overcome the impossibility of obtaining enough experimental data or any data at all, due to the complexity of the investigated system, the slow dynamic or long period of time. Starting from very specific aspects or components, BS has progressively included, typically with a modular approach, the whole building or even the urban scale.

In recent years, building simulation has increasingly taken advantage of the tremendous growth in the availability of computational capacity, thanks to new processors, parallel calculation, cloud computing, etc., and has opened new perspectives and uses. The enhancement of the level of detail, the extension of the size and application range of the domain of investigation and the increase in the level of accuracy and generality of the results have all been established as mainstream focal points. In parallel, the diffusion of calculation capacity has awoken the interest of practitioners and professionals in new practical applications.

These trends also characterized the second IBPSA-Italy conference, which took place for the second time at the Free University of Bozen/Bolzano from 4 to 6 February 2015. Almost 100 attendees, 198 authors, 67 presentations, and 4 keynote speakers confirmed not only the interest in building simulation, but also the relevance and coherence of the above

focuses. In particular, four sections were devoted to the detailed modelling of phenomena and components (advanced modelling, solar radiation, energy systems and envelope modelling), three to the integrated and non-energy performance analysis (lighting and user behavior), three to the optimization techniques for high performance buildings and retrofit, and two to the development and validation of new tools.

The participation of authors and delegates from 15 countries, together with the keynote speakers Ardeshir Mahdavi (Vienna University of Technology), Ian Beausoleil-Morrison (Carleton University), Jan Hensen (Eindhoven University of Technology) and Athanasios Tzempelikos (Purdue University), offered the opportunity to discuss issues with an international audience as well as to compare and to enhance the quality of the national research.

The presentation of the first IBPSA Italy Awards for PhD Student Papers demonstrated the commitment towards the growth of a new generation of young researchers who will be able to sustain and diffuse the best use of BS.

The presentation of the first IBPSA Italy Awards for Simulation Assisted Design to distinguished practitioners using building simulation in their business confirmed how seriously the IBPSA takes practical applications of BS.

The presence of the local Engineers and Architects Orders, of the AICARR (the Italian Association of Air conditioning, Heating and Refrigeration), ANDIL (the Italian Association of Clay Brick and Roof Tile Producers) and ASSOVETRO (the Italian Association of Glass and Glazing Systems Producers), together with the institutional support of the Autonomous Province of South Tyrol and of the CasaClima Agency, allows us to be even more confident that the journey undertaken has been, and will continue to be, a great success.

Andrea Gasparella, Free University of Bozen-Bolzano

Table of Contents

Preface.....	V
Common fallacies in representation of occupants in building performance simulation <i>Ardeshir Mahdavi</i>	1
The importance of software's and weather file's choice in dynamic daylight simulations <i>Laura Bellia, Alessia Pedace, Francesca Fragliasso</i>	9
Outdoor Comfort: the ENVI-BUG tool to evaluate PMV values point by point <i>Kristian Fabbri, Antonello Di Nunzio, Ernesto Antonini, Andrea Boeri</i>	17
Aspects of uncertainty in representation of occupants' diversity in building performance simulation <i>Ardeshir Mahdavi, Farhang Tahmasebi</i>	23
Prediction of vertical irradiance on building surfaces: an empirical comparison of two models <i>Ehsan Vazifeh, Matthias Schuss, Ardeshir Mahdavi</i>	27
Improving energy efficiency through the optimization of buildings' operational regime: simulation based case studies <i>Farhang Tahmasebi, Mahnameh Taheri, Matthias Schuss, Ardeshir Mahdavi</i>	33
Performance evaluation towards improved BiPV-Systems – Simulation of BiPV-systems installed on existing building facades using TRNSYS <i>Sascha Lindig, David Moser, Stefano Avesani, Roberto Lollini</i>	41
Appraising the effects of window opening behaviour in an office building in different climates <i>Sara Torabi Moghadam, Federica Soncini, Valentina Fabi, Stefano P. Corgnati</i>	51
Prediction of the Sound Insulation of Double Leaf Facades with Openings for Natural Ventilation <i>Egzon Bajraktari, Josef Lechleitner, Ardeshir Mahdavi</i>	59
Influence of varying mix proportions on thermal performance of soil-cement blocks <i>Balaji N.C, Praseeda K. I., Monto Mani, Venkatarama Reddy B. V.</i>	67
Achieving High-Performance Building Design in the Tropics through Modelling and Simulation: A case study in Singapore <i>Bharath Seshadri, Zhou Jian, Vincent Partenay, Priya Pawar, Adrian Lamano</i>	75
Modelling, testing and optimization of a MVHR combined with a small-scale speed controlled exhaust air heat pump <i>Fabian Ochs, Dietmar Siegele, Georgios Dermentzis, Wolfgang Feist</i>	83
BIM and interoperability for energy simulations <i>Bernardino Chiaia, Sanaz Davardoust, Anna Osello, Niccolò Aste, Manlio Mazzon</i>	93
Urban heat island in Padua, Italy: simulation analysis and mitigation strategies <i>Luca Battistella, Marco Noro</i>	99
Multi-zone buildings thermo-hygrometric analysis: a novel dynamic simulation code based on adaptive control <i>Annamaria Buonomano, Umberto Montanaro, Adolfo Palombo, Stefania Santini</i>	109
Energy simulation in early stage building design: simplified models and impact on results <i>Marco Picco, Marco Marengo</i>	119
The Solar Response Factor for the dynamic response of buildings to solar heat gains <i>Gianpiero Evola, Luigi Marletta</i>	127
Comparison of energy simulations for a residential unit: a rapid method for an integrated decision tool <i>Alberto Beltrami, Marco Picco, Marco Marengo</i>	137
Thermal modelling of complex fenestration systems – Comparison of a BSDF-based model with simplified approaches <i>Hauer Martin, Geisler-Moroder David, Hiller Marion</i>	147

A new climate-based daylight metric for hot climates <i>Islam Ayman Mashaly, Yussra Mohamed Rashed, Muhammad Adel, Khaled Nassar</i>	155
The effect of vegetation on daylight availability <i>Islam Ayman Mashaly, Yussra Mohamed Rashed, Muhammad Adel, Khaled Nassar</i>	163
Solar assisted ground source heat pump performance assessment for residential energy supply in southern European climates <i>Natale Arcuri, Francesco Reda, Pasquale Loiacono, Domenico Mazzeo</i>	171
Energy consumption of buildings and occupant behavior. An investigation in Mediterranean climatic conditions <i>Piero Bevilacqua, Cristina Carpino, Dafni Mora, Marilena De Simone</i>	181
Energy retrofit and conservation of built heritage using multi-objective optimization: demonstration on a medieval building <i>Francesca Roberti, Ulrich Filippi Oberegger, Elena Lucchi, Andrea Gasparella</i>	189
Energy performances of a passive house for Mediterranean climate: a case study <i>Cristina Carpino, Piero Bevilacqua, Roberto Bruno, Natale Arcuri</i>	199
Building simulation based optimization through design of experiments <i>Jay Dhariwal, Rangan Banerjee</i>	207
A verification of CitySim results using the BESTEST and monitored consumption values <i>Walter Emmanuel, Kämpf Jérôme</i>	215
Integrated design and dynamic simulation for a new zero energy building <i>Dama Alessandro, Angelotti Adriana, Penso Davide</i>	223
A parametric approach to design a wooden climatic responsive village in Atacama Desert (Chile) <i>Francesco Leccese, Alessandro Mattoccia, Michele Rocca, Rodrigo Rubio, Giacomo Salvadori</i>	231
Energy Saving Exploiting Light Availability: A New Method to Evaluate Daylight Contribution <i>Claudio Campanile, Francesco Leccese, Michele Rocca, Giacomo Salvadori</i>	239
Estimation of the water flow rate and energy consumption of a central heating system in an office building using system identification <i>Daniele Antonucci, Federico Noris, Ulrich Filippi Oberegger, Andrea Gasparella</i>	247
Comparison between hourly simulation and bin-method for the seasonal performance evaluation of electric air-source heat pumps for heating <i>Claudia Naldi, Matteo Dongellini, Gian Luca Morini, Enzo Zanchini</i>	255
Cost optimal and net zero energy office buildings solutions using small scale biomass-based cogeneration technologies <i>Ayman Mohamed, Ala Hasan, Kai Sirén</i>	263
Integrated performance simulation of an innovative net zero energy modular building <i>Francesco Fantauzzi, Paolo Belardi, Francesco Asdrubali, Samuele Schiavoni, Sara Sambuco</i>	273
Study of the energy performance of a retrofitting office <i>Paolo Valdiserri</i>	281
Coupling dynamic energy and daylighting simulations for complex fenestration systems <i>Giuseppe De Michele, Ulrich Filippi Oberegger, Luca Baglivo</i>	289
Simulation experiences for the thermal performance improvement of naturally ventilated classroom in the tropics of Costa Rica <i>Emily Vargas Soto, Gerardo Saelzer Fuica</i>	297
A new computational model: G.E.A.R. Graphical Expert Analytical Relations <i>Martino Marini, Roberto Baccoli, Costantino Carlo Mastino, Valerio Da Pos, Zoltán Tóth</i>	305
A new simulation tool for the evaluation of energy performances of green roofs <i>Domenico Mazzeo, Piero Bevilacqua, Marilena De Simone, Natale Arcuri</i>	313
A holistic method for energy renovation of buildings: focus on users' involvement <i>Giulia Degan, Carsten Rode, Daniele Vettorato, Marco Castagna</i>	323
The role of user behavior modeling on the energy performance simulations <i>Marco Aldegheri, Alessandro Prada, Paolo Baggio, Michela Chiogna</i>	331

Application of Building Simulation to support ISO 50001 Energy Management: Case study of Fiumicino Airport <i>Luis M. Blanes, Andrea Costa, Marcus M. Keane</i>	339
Dynamic simulation and on-site monitoring of a combined solar and pellet system in a low energy house <i>Elisa Carlon, Alessandro Prada, Markus Schwarz, Christoph Schmidl, Marco Baratieri, Andrea Gasparella, Walter Haslinger</i>	347
A parametric design-based methodology to visualize building performance at the neighborhood scale <i>Giuseppe Peronato, Emilie Nault, Francesca Cappelletti, Fabio Peron, Marilyne Andersen</i>	351
Exploring the occupancy behaviour and perception in an office building <i>Livia Seres, Ulrich J. Pont, Matthias Schuss, Ardeshir Mahdavi</i>	359
Window shades: selecting optical properties for visual comfort <i>Ying-Chieh Chan, Athanasios Tzempelikos</i>	367
ProCasaClima 2013: CasaClima building simulation software <i>Matteo Rondoni, Ulrich Santa, Ulrich Klammsteiner, Martina Demattio, Mariadonata Bancher, Alexander Told, Thomas Zelger</i>	377
Graphic and parametric tools for preliminary design stage of natural ventilation systems <i>Margherita Ferrucci, Maurizio Brocato, Fabio Peron, Francesca Cappelletti</i>	383
Advancement in the development of an Open Source Object Oriented BPSt: development methodology <i>Livio Mazzarella, Martina Pasini</i>	391
A methodology to integrate advanced lighting and thermal analyses for building energy simulation <i>Silvia Cammarano, Anna Pellegrino, Valerio R. M. Lo Verso, Chiara Aghemo</i>	399
BIM-generated data models for EnergyPlus: A comparison of gbXML and IFC Formats <i>Ira Ivanova, Kristina Kiesel, Ardeshir Mahdavi</i>	407
Passive solutions for the optimization of the indoor environmental quality: a case study <i>Fabio Sicurella, Perla Colamesta</i>	415
Modelling of domestic fine particles indoor exposure, its main sources and potential mitigation measures: the case of Beijing <i>Sandra Stefanović, Žarko Stevanović</i>	423
Application of aerogel-based plaster towards thermal retrofit of historical facades: A computational assessment <i>Olga Proskurnina, Ulrich J. Pont, Mirosława Kornicki, Ardeshir Mahdavi</i>	431
Long-term and spatial evaluation of the integrated performance of a window-shade system in an open space office located in Rome <i>Anna Maria Atzeri, Francesca Cappelletti, Athanasios Tzempelikos, Andrea Gasparella</i>	439
Energy cost and discount rate influence on the optimal packages of energy efficiency measures <i>Vincenzo Corrado, Ilaria Ballarini, Ilenia Ottati, Simona Paduos</i>	447
Energy building retrofitting of a multifamily house: a case study <i>Chiara Dipasquale, Roberto, Diego Bertessina, Alessandro Bellini</i>	455
The use of biomass in the building renovation: a cost-optimal perspective analysis <i>Enrico De Angelis, Giorgio Pansa, Martina Cereda</i>	463
Passive cooling strategies in the refurbishment of Mediterranean buildings: simulation analysis of thermal mass and natural ventilation combination <i>Filippo Calcerano, Carlotta Cecchini</i>	473
Daylighting optimization for informal settlements in Cairo, Egypt <i>Ayman Wagdy, Ahmed Abdelghany, Mohamed Amer Hegazy</i>	483
CFD vs. lumped models applied to HAM: a comparison between HAM-Tools and Comsol <i>Amos Ronzino, Vincenzo Corrado, Maximilian Neusser, Thomas Bednar</i>	491
Optimizing Window size of South Facades in Tehran City and the Environmental Impacts <i>Fazel Khayatani, Seyed Amin Tabatabaei Fard, Maryam Meshkin Kiya</i>	499
Analysis of energy efficiency measures on envelope and control systems: case study for an existing building <i>Giovanni Semprini, Alessandro Gober, Francesca Zandi</i>	507

Robustness of multi-objective optimization of building refurbishment to solar radiation model <i>Alessandro Prada, Giovanni Pernigotto, Francesca Cappelletti, Andrea Gasparella</i>	517
The impact of thermal comfort in multi-objective optimization of buildings refurbishment <i>Paola Penna, Alessandro Prada, Francesca Cappelletti, Andrea Gasparella</i>	527
A multi-objective optimization analysis on high-performance buildings connected to district heating-CHP system <i>Dario Prando, Alessandro Prada, Fabian Ochs, Andrea Gasparella, Marco Baratieri</i>	537
Experimental characterization of the dynamic thermal properties of opaque elements under dynamic periodic solicitation <i>Giovanni Pernigotto, Alessandro Prada, Francesco Patuzzi, Marco Baratieri, Andrea Gasparella</i>	547
Re-thinking of energy consumption classification by the patterns of occupant behaviour: a conceptual framework <i>Gölsu Ulukavak Harputlugil, Timuçin Harputlugil</i>	557
